DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to a catalytic converter, classified in class 422, subclass 177.
 - II. Claims 9-11, drawn to a method for manufacturing a catalytic converter, classified in class 29, subclass 890.
 - III. Claims 12-25, drawn to a method for achieving light off in a catalytic converter, classified in class 423, subclass 210.
 - IV. Claims 26-41, drawn to a variable flow regulator assembly, classified in class 422, subclass 168.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and III are related as process of making and process of using the product.

The use as claimed cannot be practiced with a materially different product. Since the product of group I is not allowable, restriction is proper between said method of making and method of using. The product claims of group I will be examined along with the elected invention (MPEP § 806.05(i)).

3. Inventions I and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as

claimed, such as the actuation mechanism or the interference tab. The subcombination has separate utility, such as water pipe.

4. Inventions IV, III and II are independent and distinct.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, recognized divergent subject matter and the search required for one group is not required for other group, restriction for examination purposes as indicated is proper.
